

SECTION 02 - UNIT TESTING SQL AND JPA QUERIES

Index

- Intro.....	2
- Testing JPA queries.....	2

- Intro

- About the Customer unit the idea is that we have a person and the person will issue a pull request against the API to become a customer so the customer unit will contain all the logic for handling that request.
- We're gonna implement everything within the Customer unit and then test it.
- When you wanna test things you **shouldn't** implement everything in one go and then test it at the end. You should implement the smallest unit possible and then test it to make sure it works and then move on.

- Testing JPA queries

- On top of the testing class name I should define `@DataJpaTest`.
